21B3021	Ammonium chloride	12125-02-9	Hazardous to the aquatic environment (Acute)	Category 3	-	-	H402 : Harmful to aquatic life	P273 : Avoid release to the environment. P501 : Dispose of contents/container to ...	Classified into Category 3 from its 96h-LC50 = 74.2 mg/L for fish (Bluegill) (ECETOC TR91, 2003).	-	-	-	-	-	-	Due to under review.	2016/12/19
21B3021	Ammonium chloride	12125-02-9	Hazardous to the aquatic environment (Long-term)	Not classified	-	-	-	-	Classified into Not classified from 21d-NOEC = 14.6 mg/L for Crustacea (Daphnia magna) (SIDS, 2006) and 28d-NOEC = 8.0 mg/L for fish (Atherinidae) (SIDS, 2006) though the acute toxicity is Category 3.	-	-	-	-	-	-	Due to under review.	2016/12/19
21C0012	Nickel	7440-02-0	Flammable solids	Classification not possible	-	-	-	-	<u>Powder and dust fall into UN1436 and are described as "easily ignited, causing explosion" in IMDG. Particle size and form influence on the results, therefore the classification should be done by conducting the designated test according to Chapter 2.7.2.4 Note in GHS documents. Zinc block is classified into Not classified.</u>	Classification not possible	-	-	-	-	-	<u>Since the shape of the particles of this substance were not specified and no other data is available, the classification of the substance is not possible. In addition, based on the ICSC (2004), the dust of the substance is inflammable, and according to Sax (11th, 2004), the risk of fire and explosion generally increases as powder form of the metal becomes finer. As additional background information, the UNRTDG rated flammable metal powder (Not Otherwise Specified) as Division 4.1 and packing group II and III (UN No. 3089), which falls under Category 1 or 2.</u>	March, 2018
